# DISPERSAL

50%  
DISCOUNT  
for BES  
members

Edited by J Bullock, R Kenward and R Hails

*Dispersal* is central to many modern developments in ecology and is an area of study that is increasingly gathering attention. This volume, based on the 2001 BES symposium, aims to create links between ecological disciplines, between different areas of theory and between empirical and modelling approaches to dispersal and will also inform some of the most important problems of applied ecology. An international team of experts discuss four main topic areas: dispersal and its measurement; evolution and behavioural ecology; dispersal and spatial process; and applications of an understanding of dispersal. They present new and exciting studies that are being undertaken and cover all taxa. Thus, this book will prove to be an invaluable reference both to advanced level students and established researchers in the field.

April 2002, 450 pages, 150 illustrations

0632058765 - hardback £59.95 / £29.98 (BES member)

0632058773 - paperback £29.50 / £14.75 (BES member)

50% discount to members of the British Ecological Society
